

ORCID

Connecting Research
and Researchers

What is ORCID?

ORCID'S VISION IS A WORLD WHERE ALL WHO
PARTICIPATE IN RESEARCH, SCHOLARSHIP, AND INNOVATION
ARE UNIQUELY IDENTIFIED AND CONNECTED TO THEIR
CONTRIBUTIONS AND AFFILIATIONS ACROSS TIME,
DISCIPLINES, AND BORDERS.

ORCID Services

1. Free unique identifier for researchers
2. Record to document research activities
3. API to transfer this data between systems

Specific Benefits for Grad Students

1. Get an ORCID iD & Record early in their scholarly career
2. Begin building their ORCID record from the start so they don't have to retroactively add contact later
3. Grad students will carry this iD with them throughout their research career
4. They will see content added to their ORCID record from publishers, funders and employers
5. They will experience the efficiency of logging into a system with their ORCID iD, content will be pre-populated for them

ORCID Registry

ORCID for Organizations

ORCID for Grad School Administrators

- Get data on current students for reporting
- Analyze data on Grad students works & funding
- Call data on Alumni for reporting
- Create great stories of success for Executive & Communication pieces

ORCID for Librarians & Archivists

- ORCID iD is a unique identifier
- So published work can be attributed to the right person
- This also enables researchers to change their name without repercussion to their scholarly record.
- The ORCID registry is open to be harvested
- Improving access and discoverability to the research
- Your ETD system is similar to a publisher's manuscript submission system
- You accept works, validate the work & author, add an ORCID iD and in essence, publish it.

What other Graduate Schools are doing in the US

- **Univ. of Texas Southwestern Medical Center** – requiring all learners to get an ORCID iD and connect it with UTSW's centralized ORCID integration, <https://lyrasisnow.org/orcid-for-learners-at-ut-southwestern-medical-center/>
- **Univ. of Maryland** – ORCID membership is led by the graduate school and all grad students are encouraged to connect their ORCID iD
- **Univ. of Massachusetts at Amherst** – Graduate Council approved mandatory ORCID iDs for students finishing their degrees
- **Indiana University Bloomington** – typically promotes ORCID at grad student receptions at the beginning of each semester
- **Texas A&M** – all grad students must have an ORCID iD when they submit their ETD
- **Univ. of Virginia** – ORCID API is integrated with ETD Repository (Samvera) although ORCID iDs are optional, not required.
- **Augusta University** - ORCID iDs are highly encouraged when submitting ETDs; ORCID is promoted at graduate school orientation during the Libraries session, as well as covered in specific graduate courses (e.g. Scholarly Communications for Nursing PhDs). Our hope in the future is to have ORCID iDs required by all graduate students.

Abstract

The methods for studying the epoch of cosmic reionization vary from full radiative transfer simulations to purely analytical models. While numerical approaches are computationally expensive and are not suitable for generating many mock catalogs, analytical methods are based on assumptions and approximations. We explore the interconnection between both methods. First, we ask how the analytical framework of excursion set formalism can be used for statistical analysis of numerical simulations and visual representation of the morphology of ionization fronts. Second, we explore the methods of training the analytical model on a given numerical simulation. We present a new code which emerged from this study. Its main application is to match the analytical model with a numerical simulation. Then, it allows one to generate mock reionization catalogs with volumes exceeding the original simulation quickly and computationally inexpensively, meanwhile reproducing large scale statistical properties. These mock catalogs are particularly useful for CMB polarization and 21cm experiments, where large volumes are required to simulate the observed signal.
